Learning Objectives

- ✓ Interiorizar MVP (Minimum Viable Product)

- **MVP (Minimum Vital Product)**
  - Enamórate del problema y no de tu idea

MVP representa el mínimo set de actividades y/o funcionalidades para comprobar o rechazar una primera hipótesis de negocio.

No es la primera versión del producto.

RELIABLE
FUNCTIONAL

- Validate product idea hypotheses with real-life data.
- Reduce time-to-market for new feature releases.
- Deliver value to your early adopters quickly.
- The MVP is the shortest route that delivers the most value to your first customers while simultaneously generating learnings for you.
- Test your product/market fit before building a full-fledged product.
- Collect viable data on user behavior to shape future product initiatives and go-to-market strategy.
- MVPs can be used as a leading component in your product prioritization process to help you make data-driven decisions.
- Grow a pre-launch user base.
- Eliminate waste — save money and time that would otherwise be spent on fruitless ideas.
